

The Veil Nebula

Isaac Newton Telescope + WFC

This image is part of the Eastern Veil Nebula, or NGC 6992, and it was obtained using the Wide Field Camera on the Isaac Newton Telescope. It is a three-colour composite made from data collected using filters to isolate the light emitted by hydrogen alpha (H-alpha), doubly ionised oxygen (OIII) and ionised sulfur (SII) atoms, and coded in the image as red, green and blue respectively.
