

Multi-Object Spectroscopy in the Next Decade: Big Questions, Large Surveys and Wide Fields

Santa Cruz de La Palma, Canary Islands, 2-6 March 2015

Conference Proceedings

Dear Colleagues,

Firstly, we'd like to thank each of you for your invaluable contribution to, and participation in, the "MOS in the Next Decade" conference in La Palma. The great success of the conference is a tribute to the high quality of the presentations that each of you made during the week. This can only be enhanced by the written record of your work that we now ask you to submit for the upcoming conference proceedings, which will be published in the Astronomical Society of the Pacific Conference Series (ASPCS).

We've written brief guidelines for creating your manuscript, and provide links for downloading the ASPCS Latex templates and style files, at

<http://www.ing.iac.es/conferences/mos/authors.html>

To ensure timely publication of the proceedings we request that contributions should be submitted no later than 8th May 2015 by email to MOSLaPalma@ing.iac.es.

We're acutely aware that paper proceedings and on-line versions of talks strongly complement each other, and so to encourage submission of manuscripts we will make available on-line copies of all talks when at least 2/3 of manuscripts are submitted. If you do not want your talk to appear on-line, please let us know.

Best regards,

Ian & Scott

Ian Skillen (ING) and Scott Trager (University of Groningen)
