

Mirror reflectivity report for CO2 cleaning on 27 July, prompted by >1% loss of Reflectivity following two Calima events.

First data since CO2 cleaning on 27/6

Index	date/time	Temp. °C	Reflectivity (%R) wavelength of band (nm)								"Dust Indices" (DI)

change since CO2 on 27/6				-1.2	-1.1	-1.2	-1.2	-1.2	-1.1	-1.2	1.0	1.0	1.3	1.2	1.8	1.8	2.1

The previous cleaning was shown to have improved reflectivity by 1.2%, therefore this change warrants a new CO2 cleaning. On 27th July there was an opportunity to do CO2 cleaning and the Aligal2, previously tested on INT M1, was used.

Measurements before cleaning

Measurements after cleaning with new CO2 (Algal2)

CO2 cleaning aborted due to appearance of marks left on mirror by unusually sticky snowflakes, seem to be made of bunched up dust. Right hand side of the mirror affected (about one third).

left porthole first (not cleaned)

				365	404	464	522	624	760	970	365	404	464	522	624	760	970
770	27/07/2016 13:42	1 WHTM1 all	24.9	91.1	89.5	89.1	89	88	85.4	90.9	3.6	3.6	4	3.5	4.3	4.2	4.4

difference before/after				1.2	1.3	1.2	1.3	1.4	1.3	1.5	-0.7	-1.0	-1.3	-1.2	-1.8	-2.0	-2.2
				365	404	464	522	624	760	970	365	404	464	522	624	760	970

Conclusion: the CO2 has cleaned the mirror but leaves a non-uniformity in reflectivity of about 0.5% more than usual

Note the dust marks could not be removed by blowing with dry air pistol at 5 bar, suggesting they are bound by condensed water to the surface.
