

**Measurements of WHT Primary Mirror reflectivity before and after CO2 cleaning**

Taken by Neil O'Mahony using SMS micro-Scan reflectometer, both at AP3 and portholes

Last CO2 cleaning was on 20 April. No significant calima since then.

Successive measurements with similar scattering measurements are in same location

%R exceeding specification repeatability of 0.5% are marked "skip" & omitted from average

Ref are measurements of MG reference mirror, typically 91-93% using SMS

Lambda	0.67 micron	
Incident Angle	25 deg	<--SMS Summary characteristics
BW Limits	1 0.01	

**Measurements on M1 before cleaning**
